PROFESSIONAL SUMMARY

Software engineer with 3+ years at ZURU Tech, building production React and TypeScript apps across seven products, among them a real-time team chat, an authentication system, and a GIS compliance tool. Comfortable across the frontend stack: component design, state management with Zustand, WebSocket real-time features, performance work, and moving legacy code to TypeScript.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, HTML5, CSS3

Frontend: React, Next.js, Zustand, TanStack Query, Tailwind CSS, Redux Toolkit

Backend/API: REST APIs, WebSockets

Testing: Jest, Vitest

Tools: Git, GitLab, CI/CD, Figma, Agile/Scrum, AI-Augmented Development

Other: Prisma, PostgreSQL, Gemini API, i18n

PROFESSIONAL EXPERIENCE

ZURU Tech, Software Engineer (React.js)

May 2023 – Present

Ahmedabad, India · Online Services (housing/proptech web products)

ZURU Chat · real-time team messaging

- Built the chat's media features: image gallery, a custom video player, GIF and multi-format video, and link previews.
- Set up the real-time layer over WebSockets: team and member updates, unread counts, notification sync, and clean reconnection when the socket drops.
- Cut rendering lag in long conversations with memoization and tighter state updates, and added the block, report, and access-request flows plus English/Chinese support.

Code Compliance Tool · GIS building-code compliance platform

- Built a permission-aware (RBAC) component system that shows or hides UI based on the user's role.
- Migrated legacy JSX pages to TypeScript and the shadcn/ui design system, which cut type errors and made the UI more consistent.
- Built the core domain pages (regulations, products, test plans and labs) with filters that persist across pages.
- Refactored the product and variable components to optimize data fetching and state, and built GIS map views with coordinate and viewport handling.

ZURU Accounts · sign-in & account management

- Owned the auth frontend: login, invitations, non-registered-user signup, magic-link and social login, and silent token refresh.
- Added deep-linking that opens the desktop app after login, responsive account settings with dark mode, and Amplitude event tracking.
- Built team-management and sharing features: creating teams, team profiles, and shareable invite links.

PROJECTS

Endpoint: AI-Powered API Mocking Platform Next.js 16, TypeScript, PostgreSQL, Prisma, Gemini AI, SSE

Live: endpoint-ai.vercel.app Code: github.com/Digvijay-Chavda/endpoint-ai

- Built and shipped Endpoint solo: a tool that spins up working mock REST APIs in seconds without setting up a backend, deployed live on Vercel.
- Used Google Gemini 2.5 Flash to turn plain-English prompts into valid JSON responses, with output validation and caching so the same prompt does not call the API twice. Added Faker.js templates for randomised data on each request.
- Wrote the mock engine as a catch-all route covering every HTTP method, with configurable auth, CORS, latency, and error rates. Incoming requests stream live to an inspector over Server-Sent Events.

EDUCATION

B.Tech in Information & Communication Technology (ICT)	2021 – 2024
<i>Marwadi University, Rajkot</i>	CGPA: 8.84 / 10
Diploma in Information & Communication Technology (ICT)	2018 – 2021
<i>Marwadi University, Rajkot</i>	CGPA: 9.12 / 10
